The Year Ahead: Experts Predict Continued Growth for the Industry in 2015 By Gary Auman

Most businesses can look back on 2014 as having been a pretty good year. After years of struggling to emerge from the worst recession in recent memory, things seemed to be more on track in the past year. Optimism started to creep back into the economic psyche, and business was once again moving forward. Many in the plumbing and HVAC industry saw this positive growth for their businesses. Part of this was due to a generally improved economy. But, other factors, such as rising consumer confidence and a continued drive toward energy and resource efficiency, have contributed as well. **PEX or Copper: Which is
more sustainable?
*By Kim Bliss***

With the shift to environmental building design, professionals are now tasked with the challenge of creating a structure that is sustainable, cost-effective and high-performing - which is no easy feat. However, new technologies are offering alternatives to help professionals find that perfect balance of saving green while staying green. Take PEX piping, for example. PEX is an acronym for crosslinked polyethylene, which is a flexible, durable plastic piping product predominantly used in the plumbing and radiant heating and cooling markets. While it has been used successfully in residential applications for the past 40 years, the use in commercial markets is relatively recent - in the past decade or so. [Read More](#)
